

Need help with installing? Here's how ...

1. Click on the download link for "The Latest Source CD" and then click 'Save'.
2. Save the file using the file name that appears and save it onto your desktop using the drop down menu (this will make it easier for you to find once it's finished saving).
3. The file will download and a folder will appear on your desktop. Locate the folder and double click on it.
4. You should see a second folder called 'Install-SOURCE'. Double click on this and then double click on 'Install.exe' and click 'Run'.
5. Follow the onscreen prompts to finish installing.
6. On your desktop you will now see a Source icon. Double click on this and follow the onscreen prompts to register.

Please note that installation may differ slightly according to your version of Windows™ and compression software you may have installed.

If you need any help with installation, or if you wish to use the networked version of Source, call technical support on (029) 2026 5267 who will be happy to help.
